

# Growth Hormone Restoration: Sermorelin Acetate

## Overview

- Improves body composition
- Increases lean tissue
- Decreases body fat
- Improves sleep
- Enhances mood

Sermorelin is categorized as a member of the Growth Hormone-Releasing Hormone (GHRH) analogue drug class. Sermorelin can significantly promote the release of Growth Hormone, as well as improve GH serum concentrations and insulin-like growth factor 1 (IGF-1).

Sermorelin is commonly prescribed for the treatment of Adult Growth Hormone Deficiency (AGHD). It's also used for other medical issues such as low natural GH production.

## Combination Therapies for GH Release/Body Composition

- GLP-1/GIP agonists like Semaglutide, Tirzepatide, or Liraglutide
- Sarcotropin (oral medication)

## Suggested Dose

Inject 500 mcg to 1000 mcg at night before bed. Sermorelin can be administered in 12-week cycles with a holiday of 30 days if IGF-1 levels decrease after initial treatment.

Sermorelin	SKU	Patient Price	Pharmacy
